

ENVIRONMENTAL POLICY DECLARATION

Brewery Huyghe is very conscious about its responsible role with regards to the community and the environment in general. Producing in a way that is respectful to the environment, the safety and health of its employees and the neighbours, is a basic principle within the brewery's activities.

The desire of Brewery Huyghe for sustainable entrepreneurship

Brewery Huyghe is an environment-conscious company with special attention for sustainable entrepreneurship. Prior to implementing, every new investment or technological change will first be evaluated on its environmental impact. This means that the brewery will check in what way the potential negative influence on man, environment and society can be minimised. Quality and the use of the best available techniques are also a permanent element. During production the brewery makes use in the best way possible of green electricity and energy recuperation. This is mainly driven by a sense of responsibility towards society, rather than being a way to bring down the cost for a bottle of Delirium.

We also inform our employees that law abides them to take up their personal responsibility during their work; and specifically with regards to their own safety, health and wellbeing and the eventual negative impact on their co-workers. Everyone should work in a considerate way, follow the instructions as stipulated in the company directions and work in a constructive way with regards to safety and environmental care. Any problems, incidents, errors or calamities should be reported immediately and will lead to corrective and/or preventive measures. One should act in an environmental-friendly way at all times.

Brewery Huyghe guarantees that its employees are trained and motivated to implement this policy in their day-to-day work. The daily care of each employee should result in a decrease in waste and energy use.

Environmental objectives:

- Reducing waste and where possible reuse or recycle materials

Environmental policy

- Reduce energy use by smart energy management in the offices, machines, transport means and processes.
- Prevention and reduction of pollution of air, water and land where possible.
- Stimulating environmental-savvy acting by all employees
- Consultation with clients and suppliers to promote environmental-friendly processes and to stimulate correct use and removal of used materials
